ENTERPRISE ARCHITECTURE

The benefits of Enterprise Architecture (EA) can be summed up in three words -- better, faster, cheaper. EA has become a valuable aspect of Information Technology (IT) organizations, however, realizing its full potential can be challenging. There are many aspects to EA, including architecture planning, governance, taxonomies and ontologies, all of which impact its success. Without the right guidance, tools, frameworks and methodologies, EA can quickly become unwieldy.

ISHPI's expert EA staff helps customers align their business strategy to the appropriate enterprise architecture by identifying key business drivers and translating them into a technology blueprint. This strategic plan can also be expanded to include data and application architectures. After defining requirements, *ISHPI* maps them to various technical paths and organizational models to develop a strategic vision for enterprise computing. Typically, the strategy identifies the current and likely future requirements for the enterprise architecture, technical and organizational issues that must be addressed to optimize performance, and the approach for enhancements to support business needs. Whether based on a Federal, DoD or commercial framework, *ISHPI* can develop a custom roadmap to meet your needs.

ISHPI provides ITIL and Project Management Institute (PMI) certified professionals who are experts in Strategic Planning, Architecture and Standards, and alignment of IT strategy and planning with organizational business goals. *ISHPI* personnel are Subject Matter Experts (SME) in establishing strategic enterprise business and architecture direction and in developing enterprise strategy, governance, programs, and transformational roadmaps. *ISHPI* personnel have supported DHS, NGA, NRO, DIA, DNI, DEA, SPAWAR, USSTRATCOM, USTRANSCOM, Air Mobility Command, providing expertise in DoDAF, FEA, Zachman, Service Oriented Architecture (SOA) and net-centric strategies.

ENTERPRISE ARCHITECTURE SERVICES

- Strategy Consulting
- Architecture Design
- Business Case Development
- Component Based Architecture
- Operational Assessment
- Implementation Planning
- Program Management
- Project Management
- Modeling and Simulation
- Standards Interpretation and Development
- Roadmap Development and Implementation
- Enterprise Integration Architecture and Strategy
- Governance Model Development
- Application Portfolio Management Integration

STRATEGIC PLANNING SERVICES

- Management Consulting
- Business Transformation
- Business Process Reengineering
- Budget Planning
- Budget / Performance Integration
- Spend Management
- Performance Measurement
- Cross-Agency Collaboration
- Transformation Framework Development
- Reference Model Development
- Capacity Planning
- Capital Equipment Replacement/Refresh Planning
- Emerging Technologies
